

- Quality German-built technology
- Cutting-edge energy management
- Australian service and support
- Market leading warranty

## Recognised as market leaders in innovation, Senec's intelligent software will keep you at the cutting edge of energy management.

Intelligent charging technology gently replenishes the battery power giving the system an unrivalled warranty.

Internet-connected, the system will also install its own software updates and let you track and control your energy usage via the **SENEC** smartphone app. All installations are by trained **SENEC** Australia technicians who offer service and support across the country.

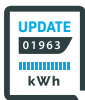

# German technology with full Australian warranty, service and support

The **SENEC.Home** system is available in 4 different capacities to suit every home from a small apartment through to a full-sized family home or even a small business.

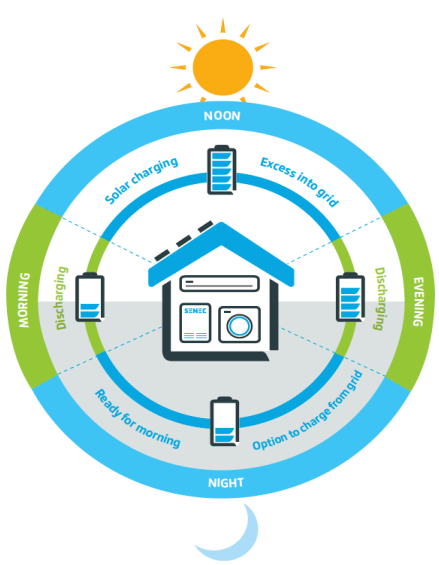

Stylish and space-saving design made in Germany, supported in Australia.

- 80%** Average results show users store over 80% of their power requirements
-  User can access and control their battery by mobile app or internet browser
-  10 year manufacturer's warranty
-  Internet-connected for free software updates and intelligent energy management
-  Maintenance-free Panasonic Lithium batteries with high power density
-  Backup power capability provides onecircuit solely for backup power

## Say goodbye to peak energy rates

On a sunny day, your solar panels will generate more than enough electricity to power your home and its appliances. **The Senec.Home gives you the ability to control when you use your solar power.** Think of the **SENEC** system as a giant, rechargeable battery that automatically steps in when the sun goes down. It's smart enough to manage your power needs without you doing a thing, around the time most people are stretching the grid and paying peak rates, you will be happily independent.

**EVENING.**  
As light levels drop, solar panels alone can't meet the high evening demand. The SENECHOME system automatically supplies the shortfall.

**NIGHT.**  
Your SENECHOME system works throughout the night. After your peak demand you can choose to replenish from the grid at off-peak rates for the morning.

**MORNING.**  
After supplying power to meet the high morning demand, your system is recharged by the sun.

**NOON.**  
Now your system's fully charged, any excess power is fed into the main grid.
